

# WING NEIGHBOURHOOD PLAN

## YOUR VILLAGE, YOUR FUTURE

### Our Changing Village

**1886 Map** - shows the village just before major changes were to happen. The Shields estate was sold to the Worralls, Wing Hall was built along with workers cottages along Top Street. Infilling development continued from this time at an average of approximately 10% every ten years. This has resulted in extensions to the village down Reeves Lane and eastward along Morcott and Glaston Roads and a greatly increased density overall.

Bottom Street - formerly 'Far Street' see 1886 map

Townsend House, Morcott Road - formerly a series of cottages at the east end of the village

### Questions we will ask:

- What particular historic aspects of the village or parish do you value?
- What qualities/aspects of the village do you think it is important to protect?
- Which buildings are most valued by the community?
- Do you think any historic aspects of the village could be enhanced?
- What do you think is unique and/or distinctive about our village?
- Are there any particular views that you consider it is important to identify and protect?
- Do you have any historical information, such as old photos, or old documents relating to the village or parish?
- Are there any local traditions than can be supported or revived?

### What we aim to do:

#### Village layout and history

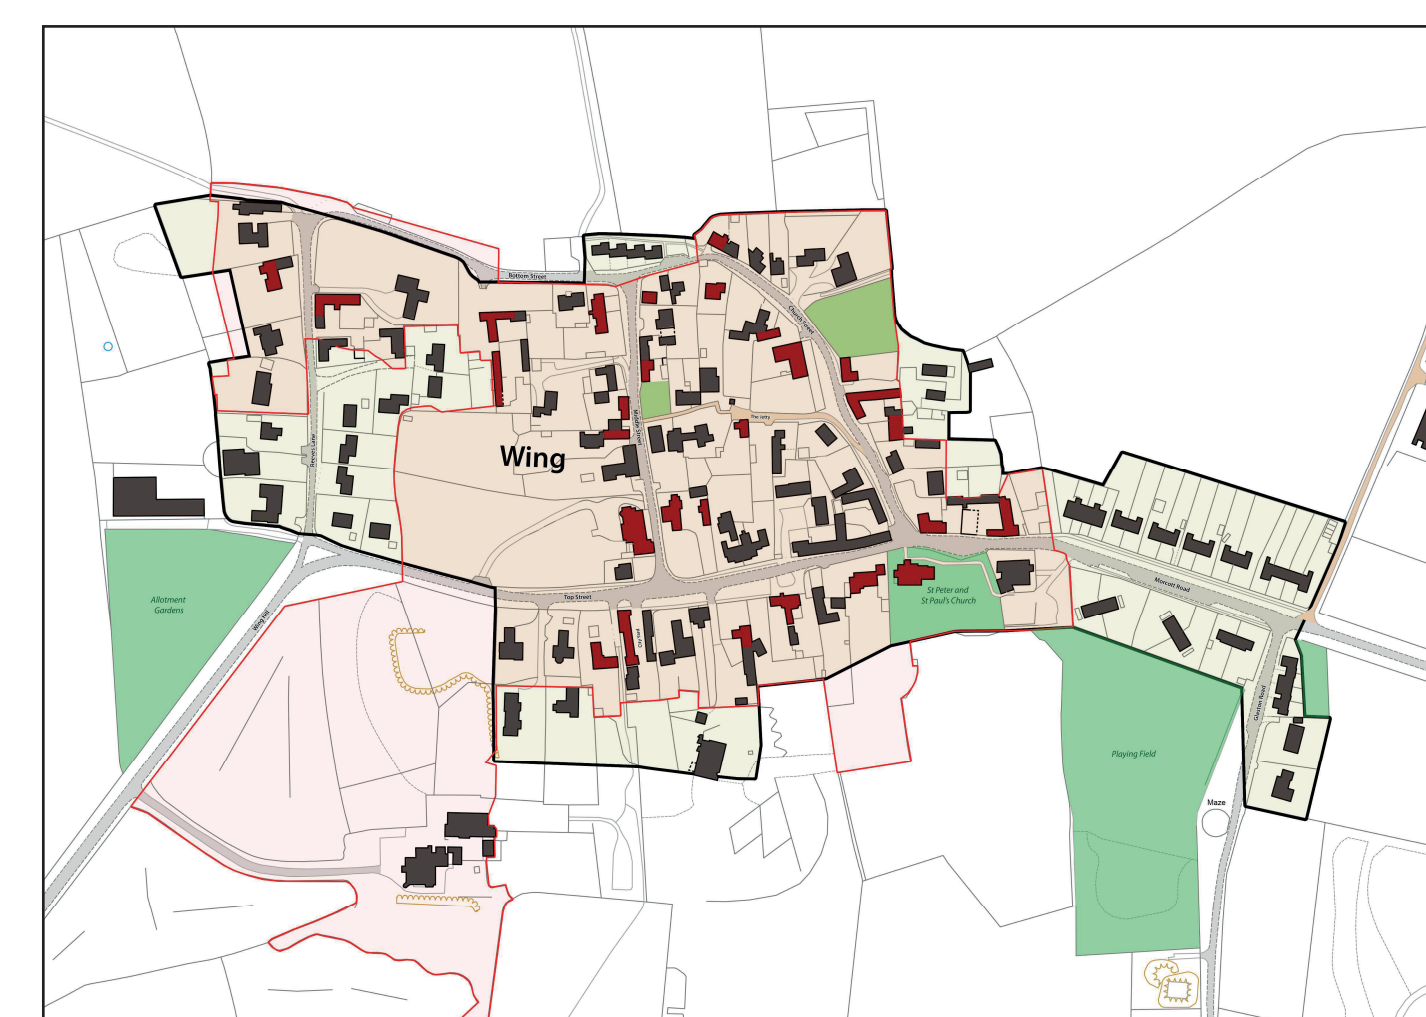

- Produce a map showing listed buildings and other buildings of local importance, showing how the village has developed over time
- Include in the map the boundaries of the conservation area and known archaeological sites and sites of scientific interest

#### Village character

- Identify building materials, styles, detailing and groupings of buildings
- Identify green/open spaces that are important to the community
- Consider how aspects of the approaches and streetscapes contribute to or detract from the character of the village
- Consider how roads, lanes, paths and railways connect the village to the surrounding landscape

#### Surrounding landscape, including views and sight lines

- Carry out a Landscape Character Assessment to capture topographic features, flora and fauna, land use, sights and sounds, cultural associations
- Identify which views are most sensitive and important to the community as a whole and consider how these might be affected by development

**2018 Map** – this is the official RCC plan of the village showing all buildings, those in red are the listed buildings. The plan shows the Conservation Area in pink with a red boundary and the Planned Limit of Development (black line).

**Two 'Important Open Spaces'** are defined on the plan, with four more suggested as

**'Potential Local Green Spaces'**. Whether these and other fields and spaces should be similarly defined as important to the character of the village is open for discussion and we seek your views.
